BLG24 / GOLD24COIN

Investor Executive Summary

September 2026

1. Executive Summary

BLG24 (commercial brand Gold24Coin) is a sovereign Layer 1 blockchain, built from scratch on the Cosmos SDK, with a fixed-supply native token called G24. The project has been live in production since May 2026 and has reached several verifiable technical milestones that place it well beyond the "whitepaper" stage: a live, running network, its own operating DEX, an official listing in the Cosmos chain registry, and active cross-chain (IBC) connectivity with Osmosis, one of the leading networks in the Cosmos ecosystem.

This document summarizes the project's current technical status, architecture, the products built around the chain, and the risks any prospective investor should understand. It does not constitute an offer of securities, nor financial or legal advice.

2. What is BLG24?

BLG24 is an independent blockchain network (not a token on another chain), with its own validator, its own block explorer, and its own identity in the official Cosmos registry. Its native token, G24, is a digital asset that uses gold as a valuation reference — it is important to clarify that G24 is not backed by physical gold nor redeemable for gold; the gold price is used solely as a reference target within a progressive pricing curve currently under development.

3. Technical Architecture

Framework	Cosmos SDK v0.50.13, with IBC v8, CosmWasm, ICA and IBC Fee
Chain ID	BLG24
Native token	G24 (on-chain denom: ug24, 6 decimals)
Supply	999 trillion G24, fixed — no inflation, no burning
Custom modules	x/dex, x/farming, x/dao, x/flashloan, x/pricing (in development)
DEX fees	0.25% total (0.20% to liquidity providers, 0.05% to treasury)
Network genesis	May 24, 2026 — in production without interruption since then

All figures above are directly verifiable against the network's on-chain state.

4. Verified Milestones

The following milestones have been confirmed directly against the chain and official sources, not merely stated:

- Official Cosmos registry listing: BLG24 is published in the official cosmos/chain-registry repository (PR #7935), enabling automatic recognition by wallets, explorers, and aggregators across the Cosmos ecosystem.
- Active cross-chain (IBC) connectivity: an open, verified channel with Osmosis mainnet (chain-id osmosis-1), with G24 already circulating as a recognized IBC token on Osmosis.
- Own operating DEX: swaps, liquidity pools, and farming working end-to-end at dex.gold24coin.com.
- Own block explorer: blg24scan.com, correctly indexing the full transaction history.
- Token sale store: a G24 sales system with payment in USDT (BNB Smart Chain) and PayPal, with automatic delivery.
- Internal code audit: a design flaw was identified and fixed in the farming module that was improperly minting new tokens, restoring the fixed-supply guarantee across the chain's 6 custom modules.
- Functional on-chain governance: governance proposals submitted, voted on, and successfully executed on-chain.

5. Product Ecosystem

5.1 DEX (dex.gold24coin.com)

Decentralized exchange platform with swap, liquidity pools, farming, DAO, and token creation (Token Factory). Integrated with the Keplr wallet.

5.2 G24 Store (token sales)

Direct G24 sales system with a progressive pricing curve (currently starting at $0.10, increasing with volume sold), with payment in USDT or PayPal and automatic token delivery.

5.3 BLG24Scan Explorer

The network's own block and transaction explorer, comparable to Mintscan or Etherscan for other chains.

5.4 BLG24 Card System

A tier verifier (Gold Standard, Gold Premium, Platinum) based on the G24 balance held in a user's wallet, published at dex.gold24coin.com/tarjetas.

5.5 BijagosBank (in development, not yet public)

A DeFi banking/staking platform for G24, currently being rebuilt privately. Its public launch is conditional on obtaining the legal permits and licenses required to operate public-facing custody and staking services. It does not yet operate with external users.

6. Tokenomics

Total supply	999,000,000,000,000 G24 (fixed)
Inflation	0% — confirmed, with no planned change
On-chain denom	ug24 (6 decimals)
Staking mechanism	Native Cosmos SDK staking (delegation), non-custodial
Staking rewards (BijagosBank)	Will come from a fixed treasury reward pool, not new issuance — exact percentages to be defined

7. Investor Risks

With the same transparency used to present the project's achievements, it is necessary to honestly disclose its current risks:

- Single operator: all infrastructure, the treasury, and the network's sole validator node currently depend on one person. This represents an operational continuity risk, not merely a technical one.
- Limited decentralization: the network currently runs a single validator, and governance is effectively controlled by the treasury wallet. This is common at the building stage, but should be kept in mind.
- Early-stage liquidity and adoption: current volumes in the DEX pools and the Osmosis bridge are technical tests, not consolidated signals of market demand.
- Pending regulatory compliance: public-facing custody/staking services (BijagosBank) are explicitly paused until the relevant licenses are obtained; no public deposits are being accepted yet.
- Gold reference: G24 uses the gold price solely as an internal valuation reference; there is no physical gold backing or right of redemption for gold.

This document does not replace independent legal, tax, or financial advice. Any investment decision should be based on the investor's own due diligence.

8. Next Steps

- Infrastructure expansion: acquisition of a second server to deploy an additional node and reduce single-point-of-failure risk.
- Completion of the progressive pricing module (x/pricing) with a full query interface.
- Funding of the farming module for real-world activation.
- Obtaining licenses for the public launch of BijagosBank.
- Final visual design of the BLG24 card system.

9. Legal Notice

This document is purely informational and has been prepared as a technical and status summary of the BLG24/Gold24Coin project. It does not constitute an offer to sell securities, tokens, or any other financial instrument, nor an investment recommendation. Specific investment terms (amount, conditions, consideration, vesting or lock-up periods) are not defined in this document and must be formalized separately, with appropriate legal review in the relevant jurisdiction.
